In 2016, 3,626 Mississippi public high school students had smoked cigarettes on at least 20 of the past 30 days.

The prevalence of frequent smoking has decreased by 81% since 1998, leading to 15,579 fewer high school students who are frequent smokers.

In the past year, the prevalence of frequent smoking has not changed significantly.

High school Caucasians are more likely to be frequent smokers than African-Americans.

12th graders are more likely to be frequent smokers than 9th graders and 10th graders.
